

Materials:

- one printer
- 4 sheets of printing paper, A4
- a pair of sharp, pointed cuticle or nail scissors
- one laminator (or: copy shop)
- a shoemaker's shop (or: one snap fastener)

Print the file units.pdf to A4 paper.

Cut parts B and C. Align edges and paste back to back.

Laminate the A and D parts as well as the B/C circle. (Or: Go to your local copy shop and have them laminated.)

Cut circles A and D from the laminating pouch. Use the sharp, pointed scissors to cut out the windows marked with the scissors symbol. Cut the overhanging laminating foil from the B/C part.

Align blank side of part A to part B, and blank side of part D to part C.

Ask your shoemaker to clinch the parts at the center point. (Or: Pierce holes through the center points and connect the parts with the snap fastener.)
